

HTML and CSS — Paper A

MEDIUM • NO COMPUTER • NO CALCULATOR • 35 MINUTES • 30 MARKS

NAME

DATE

SCORE / 30

- Answer **every** question in the space provided.
- This is a paper exam: **no computer and no calculator**. Write code by hand, exactly as you would type it. Every bracket, slash, colon and quote mark counts, and so does spelling.
- Unless a question says otherwise, use the **default box model**: width sets the content only.
- The mark for each question is shown in square brackets on the right.

Reminder box

Tags: html head title body h1–h6 p br ul ol li a img

Attributes: href (on a) src and alt (on img) style

Properties: color background-color text-align font-family

width height padding border margin

Box layers, inside to outside: content, padding, border, margin

Default box model: total width = content + 2×padding + 2×border + 2×margin

SECTION 1 – NAME THE PARTS

1. This is one link from the website of Meera's Bakery in Mysuru.

```
1 | <a href="about.html">About us</a>
```

Write down exactly which part of the code each of these is.

- (a) The opening tag [1]

- (b) The attribute (its name only) [1]

- (c) The value of that attribute [1]

- (d) The word for the whole piece of code, from the opening tag to the closing tag [1]

2. Here is the skeleton of the bakery's home page. Four tags have been left out: each one is a blank `<_____>`. [4]

```
1 <!DOCTYPE html>
2 <html>
3 <_____>
4 <_____>Meera's Bakery</title>
5 </_____>
6 <_____>
7 <h1>Meera's Bakery</h1>
8 </body>
9 </html>
```

Write the missing tag for each of lines 3, 4, 5 and 6.

Line	The tag that belongs there
3	
4	
5	
6	

SECTION 2 – WRITE IT, READ IT

3. Write the HTML for the top of Meera's page. It needs, in this order: [3]
- the main heading **Meera's Bakery**
 - a section heading **Opening hours**
 - a paragraph: **Open 7 am to 9 pm every day.**

Choose a heading level by where it sits in the outline of the page, not by how big you want the text.

4. Write the HTML for a **numbered** list of the three steps for making chai, in this order: **Boil water, Add tea, Pour.** [3]

5. The bakery has a photo called **kulfi.jpg**. It shows a vendor on Brigade Road selling pink kulfi from a steel cart. Write the tag that puts the photo on the page, with both attributes every image needs. [3]

6. A browser reads this code. [3]

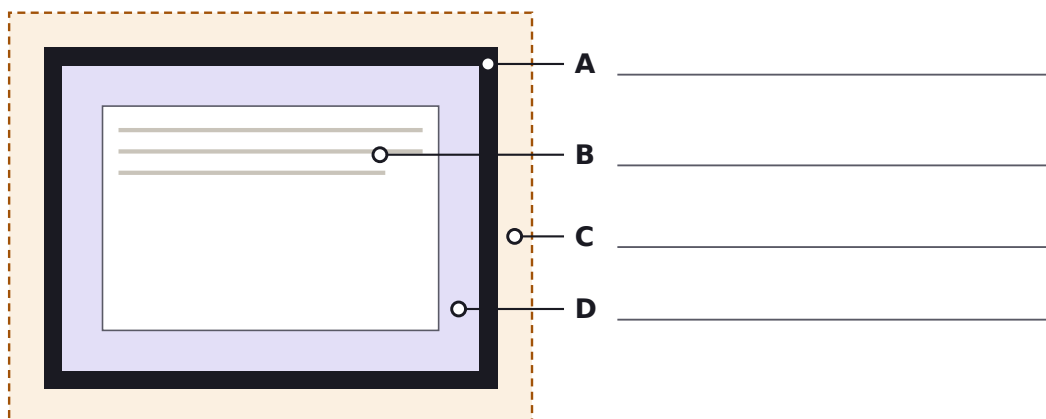

```
1 <p>Doors open at 9.<br>Match starts at 10.</p>
2 <ol>
3   <li>Toss</li>
4   <li>Batting</li>
5   <li>Tea</li>
6 </ol>
```

Write out what appears on the screen, line by line, exactly as the browser would show it.

Tags are instructions to the browser. They do not appear on the screen.

SECTION 3 – THE BOX AND THE SKIN

7. The diagram shows one HTML element drawn as a box. Write the name of the layer that each arrow points to. [4]

8. Write one CSS rule that makes the text of every **h2** dark blue, on a yellow background, and centred. [3]

Spell every word the way CSS spells it.

9. Meera styles a price tag with this rule.

```
.tag {  
  width: 100px;  
  padding: 10px;  
  border: 2px solid black;  
  margin: 8px;  
}
```

- (a) Work out the total width the tag takes up across the page. [2]

- (b) Rahul works out the total as **136 px**. Which layer has he left out? [1]

End of paper. Check every answer has a unit or a form the question actually asked for.
