

HTML and CSS — Paper B

MEDIUM · NO COMPUTER · NO CALCULATOR · 35 MINUTES · 30 MARKS

NAME

DATE

SCORE / 30

- Answer **every** question in the space provided.
- This is a paper exam: **no computer and no calculator**. Write code by hand, exactly as you would type it. Every bracket, slash, colon and quote mark counts, and so does spelling.
- Unless a question says otherwise, use the **default box model**: width sets the content only.
- The mark for each question is shown in square brackets on the right.
- **Reminder box**

Tags: html head title body h1–h6 p br ul ol li a img
Attributes: href (on a) src and alt (on img) style
Properties: color background-color text-align font-family
 width height padding border margin
Box layers, inside to outside: content, padding, border, margin
Default box model: total width = content + 2×padding + 2×border + 2×margin

SECTION 1 – COLOURS, SPELLING AND THE FOUR SIDES

1. Complete the table. Each empty box is worth one mark.

[4]

Colour	Hex	rgb
blue	#0000FF	
maroon	#800000	
lime		rgb(0, 255, 0)
yellow	#FFFF00	

Each pair of hex digits is one number. FF is 255, 80 is 128 and 00 is 0.

2. Tick the **one** line that makes the text of a paragraph red.

[1]

colour: red;

color: red;

color = red;

text-color: red;

3. Tick the **one** line that is a correct link to a page called menu.html. [1]

`<a src="menu.html">Menu</a>`

`<a href="menu.html">Menu</a>`

`<img href="menu.html">Menu</img>`

`<a href="menu.html">Menu</link>`

4. This declaration sets the margin of a box. [4]

```
margin: 5px 10px 15px 20px;
```

Write the size of each side of the margin in the table.

Side	Margin (px)
top	
right	
bottom	
left	

Four values go round the box clockwise, starting at the top.

SECTION 2 – LINKS, FAULTS AND PREDICTIONS

5. Meera's Bakery has three pages: index.html, menu.html and contact.html. Write the HTML for a navigation list: an **unordered** list with three items, where each item is a link to one of the pages. Use the link texts Home, Menu and Contact. [4]

6. This part of a page for Hampi Heritage Tours has **three** faults. [3]

```
1 <h1>Hampi Heritage Tours</h1>
2 <p>Visit the <a src="ruins.html">ruins</a>
3 
```

For each fault, write the line number and the corrected line.

7. A page contains this HTML and this CSS.

```
<h1>Chai Stop</h1>
<p>Open till 10 pm</p>
```

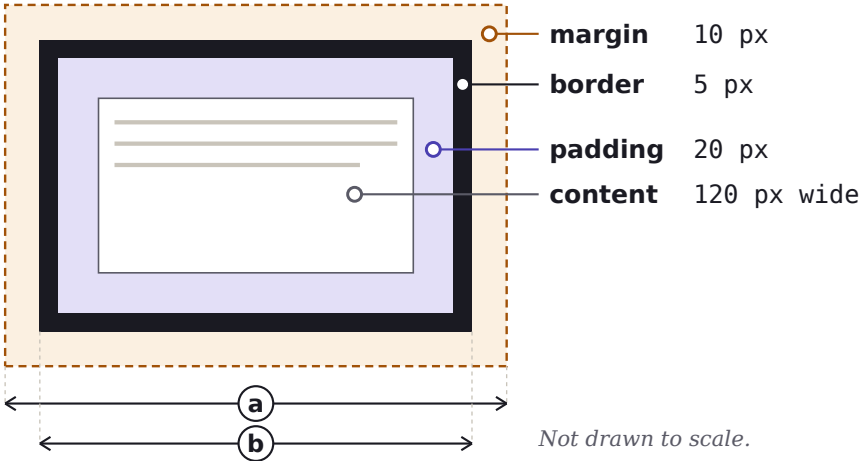

```
h1 { color: green; text-align: right; }
p { colour: blue; text-align: centre; }
```

In the table, write what the browser shows. Text colour: black, blue or green. Alignment: left, in the middle, or right.

Element	Text colour	Alignment
h1		
p		

SECTION 3 – MEASURE THE BOX

8. Here is a box in the page, drawn from the middle outwards. Each layer is the same on all four sides.

(a) Work out the total width the box takes up across the page (arrow a). [2]

(b) Work out the width of the visible box, to the outer edge of the border (arrow b). [1]

(c) Changing **only the margin**, what margin makes the total width exactly 200 px? [1]

9. Priya makes price tags for her stall in Pune.

- (a)** The text touches the edge of the coloured tag. She wants a gap between the text and the edge, with the colour filling the gap. Which layer should she increase? Give a reason. [2]

- (b)** Two tags touch each other. She wants an uncoloured gap between them. [1]
Which layer should she increase?

- 10.** Write the one CSS declaration that asks for the font Georgia, and says what the browser should use if the visitor does not have Georgia. [2]

End of paper. Check every answer has a unit or a form the question actually asked for.
