

HTML and CSS — Paper C

HARD • NO COMPUTER • NO CALCULATOR • 45 MINUTES • 30 MARKS

NAME _____

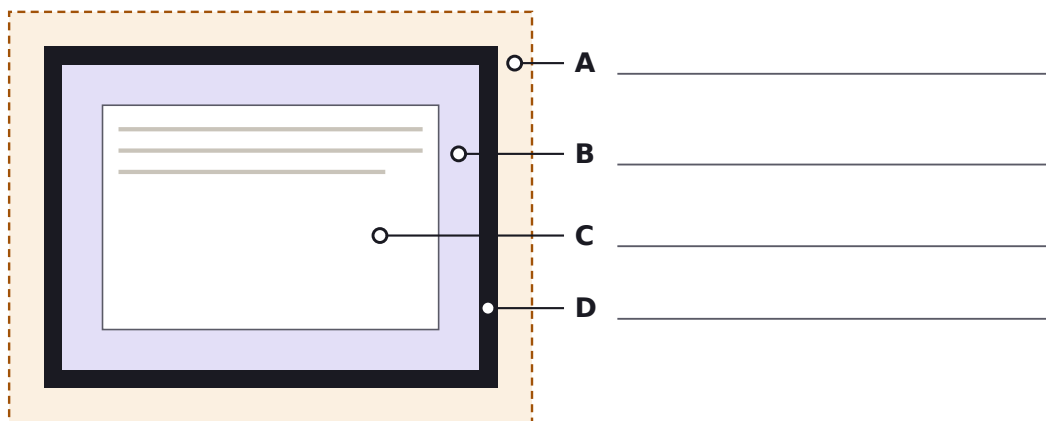

DATE _____

SCORE / 30

- Answer **every** question in the space provided.
- This is a paper exam: **no computer and no calculator**. Write code by hand, exactly as you would type it. Every bracket, slash, colon and quote mark counts, and so does spelling.
- Unless a question says otherwise, use the **default box model**: width sets the content only.
- The mark for each question is shown in square brackets on the right.
- Several questions describe pages or situations you may not have seen before. You are not expected to recognise them: apply the ideas you already have.
- Nothing is printed here to remind you of tag names, attributes, properties or the box-model formula. That is deliberate: recalling them is part of what this paper tests.

SECTION 1 – FROM MEMORY

1. The diagram shows one element drawn as a box. Write the name of the layer that each arrow points to. [4]

2. Convert these colours. Each answer is worth one mark.

(a) Write **#FF8000** as an rgb value. [1]

(b) Write **rgb(0, 0, 128)** as a hex code. [1]

(c) Write **#C0C0C0** as an rgb value. [1]

3. The Chennai Chess Club website has a picture called **logo.png** showing a green kite on a white circle. Write the HTML that makes the **picture itself** the clickable link to a page called **home.html**. There must be no separate text link. [3]

SECTION 2 – FIND THE FAULTS

4. This page for the Lalbagh Flower Show has **five** faults. Not all of them would make the browser complain. [5]

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>Lalbagh Flower Show</title>
5 <body>
6   <h1>Lalbagh Flower Show</h1>
7   <h4>Dates</h4>
8   <p>12 to 26 January.
9   <ul>
10    <li>Roses</li>
11    <li>Orchids</li>
12  </ul>
13  <img href="tulip.jpg" alt="image">
14 </body>
15 </html>
```

For each fault, write the line number, say what is wrong, and write the corrected line.

5. Isha wrote this CSS. She wants the **h1** to have white text on a green background, centred, and the **p** to use Georgia with dark red text. Neither rule does anything at all.

```
1 h1 {  
2   colour: white;  
3   background-color: #008000;  
4   text-align: centre;  
5 }  
6 p {  
7   font-family: Georgia  
8   color: darkred;  
9 }
```

- (a) Find four faults. For each, write the line number and the corrected line. [4]

- (b) Line 8 is spelt correctly, yet the paragraph text does not turn dark red. Explain [1]
why.

6. Write the HTML for the **body** of a recipe page, in this order:

[5]

- the main heading **Masala Dosa**
- the picture **dosa.jpg**, which shows a golden folded dosa with potato filling
- a section heading **Ingredients**, then a **bulleted** list: Rice, Urad dal, Potato
- a section heading **Method**, then a **numbered** list of three steps: Soak, Grind, Cook

You do not need the doctype, html, head or body tags.

7. Kavya styles a card for a stall at Chickpet market.

```
.card {
  width: 150px;
  height: 60px;
  padding: 10px 25px;
  border: 4px solid black;
  margin: 8px 0 8px 12px;
}
```

(a) Calculate the total **horizontal** space the card takes up.

[2]

(b) The card sits in a column exactly 300 px wide. Changing only the width, what value makes the card fill the column exactly?

[1]

(c) Calculate the total **vertical** space the card takes up.

[2]

End of paper. Check every answer has a unit or a form the question actually asked for.
