

HTML and CSS — Paper D

HARD • NO COMPUTER • NO CALCULATOR • 45 MINUTES • 30 MARKS

NAME

DATE

SCORE / 30

- Answer **every** question in the space provided.
- This is a paper exam: **no computer and no calculator**. Write code by hand, exactly as you would type it. Every bracket, slash, colon and quote mark counts, and so does spelling.
- Unless a question says otherwise, use the **default box model**: width sets the content only.
- The mark for each question is shown in square brackets on the right.
- Several questions describe pages or situations you may not have seen before. You are not expected to recognise them: apply the ideas you already have.
- Nothing is printed here to remind you of tag names, attributes, properties or the box-model formula. That is deliberate: recalling them is part of what this paper tests.

SECTION 1 – RECALL

- 1.** Write the complete HTML for a page with the title **Jaipur Kites** on the browser tab, a main heading **Jaipur Kites**, and one paragraph: **Festival on 14 January**. Include the line every page begins with. [3]

- 2.** Write one CSS rule for every **p**. It must use the font Verdana (with a safety net if the visitor does not have it), make the text the colour **rgb(0, 128, 0)** written as a **hex code**, and align the text to the right. [3]

3. A box in a page has this rule. The column it sits in is exactly 400 px wide.

```
.box {  
  width: ____px;  
  padding: 15px;  
  border: 5px solid black;  
  margin: 10px;  
}
```

- (a) Changing only the width, what value makes the box fill the column exactly? [2]

- (b) Anil changes the border line to border: 5px red; and no border appears. [1]
Explain why not.

SECTION 2 – BUILD AND CALCULATE

4. Jaipur Kites has three pages: index.html, shop.html and contact.html. Every page carries the same navigation list, with a link to each of the three pages, including itself.

- (a) Write the navigation list that sits on shop.html. Use the link texts Home, Shop and Contact. [3]

- (b) How many links are there in the whole site? [1]

- (c) The shop page is renamed **store.html**. How many files must be edited so that every link still works? Explain your answer. [1]

5. Three identical boxes sit side by side in a container exactly 360 px wide. The only gaps between them are their own margins. Each box has width: 80px; padding: 10px; border: 2px solid black; and margin: 6px;.

(a) Calculate the total width one box takes up.

[2]

(b) Calculate the total width of all three boxes. Do they fit in the container?

[2]

(c) The margin is changed to **10px**; nothing else changes. Do the three boxes still fit? Show how you know.

SECTION 3 – DIAGNOSE

6. Arjun is building a page for Hampi Heritage Tours.

```
1 <h1>Hampi Heritage Tours</h1>
2 <h2>Places to visit</h2>
3 <ul>
4   <li><a src="virupaksha.html">Virupaksha Temple</a></li>
5   <p>Vittala Temple</p>
6 </ul>
7 
```

(a) Find three faults. For each, write the line number and the corrected line.

[3]

(b) Explain why the alt text on line 7 is no help to a visitor who cannot see the picture.

[1]

7. Two students have written these notes. **Both are wrong.** For each one, say what the mistake is and write the correct version.

(i)

DIVYA'S NOTEBOOK

[3]

Padding and margin are the same thing, just two names. I put padding: 20px on my box to push it away from the box next to it. Now there is a 20 px gap between the two boxes.

(ii)

NEEL'S NOTEBOOK

[3]

A border is only a line, so it adds nothing to the size. My box has width: 120px; padding: 10px; border: 4px solid black. The visible box is $120 + 10 + 10 = 140$ px wide.

End of paper. Check every answer has a unit or a form the question actually asked for.
